

Rick Ligas

Web application interface designer/developer

"I've been in software interface development for a long time and I enjoy challenging projects. I like to be responsible for not only the design but also for seeing the design through to implementation. Being involved in the full project span—from requirements analysis to implementation gives me the opportunity to use all my skills." RL

Résumé

LR Communication Design

2007 – 2010

Information architect, interaction designer, front end developer, project manager

Responsibilities include: requirements research and analysis, stakeholder interviews, information architecture, workflow analysis, interaction design, interface design, implementation in HTML/CSS/Javascript, project management.
